Are photovoltaic panels selling well this year

Overview

In Q3 2025, the residential segment installed 1,088 MWdc of solar capacity, declining 4% year-over-year and quarter-over-quarter. Despite an industry rush to bring projects online this year to qualify for tax credits, equipment constraints are holding back installation growth. The US solar industry installed 11.7 gigawatts direct current (GWdc) of capacity in Q3 2025, a 20% increase from Q3 2024, a 49% increase from Q2 2025, and the third largest quarter for deployment in the industry's history. trade policy is in flux, and high tariffs have been imposed on imported solar panels, which may cause shortages. After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many. Note: Costs are expressed in constant 2024 US\$ per watt. Global estimates are used before 2010; European market benchmarks thereafter due to limited data availability.
