# **Bosch Solar Power Generation in China**

## Overview

---

The solar PV project, which is Bosch's largest renewable energy project in China, has been operational since its grid connection in 2019. Bosch Nanjing has marked another significant achievement in its commitment to green energy by signing a 2MW/4MWh Energy Storage System contract with NEFIN. This milestone was celebrated on 22 November 2023, at the Nanjing plant, where teams from Bosch Nanjing and NEFIN gathered to witness the. Increasing energy efficiency at all locations is an important part of the Bosch strategy. The Bosch Home Comfort Group is putting this strategy into practice. To do this, they must be able to strike a balance between the over- and under-supply of power that occurs when renewable sources of energy are used.

## Bosch Solar Power Generation in China

---

### Journey towards Carbon Neutrality

The Nanjing project is, by-far, the largest solar project by Bosch globally. The project is divided into two phases. With completion of the first phase, 17,422 solar modules, would be installed on available ...

---

### Technology for the energy turnaround

It will pool the power generated by local solar power plants and smaller hydro power plants, and distribute it as needed. Under the leadership of Bosch Software Innovations, the project partners ...

## incentives

The growth of solar power industries worldwide has been rapidly accelerated by the growth of the solar market in China. Chinese-produced photovoltaic cells have made the construction of new solar power projects much cheaper than in previous years. Domestic solar projects have also been heavily subsidized by the Chinese government, allowing for China's solar energy capacity to dramatically soar. As a result, they have become the leading country for solar energy, passing Germany's capacity in 20...
