# **Cadmium telluride and perovskite solar panels**

## Overview

---

Material science researchers have been studying potential ways to use or combine the naturally occurring perovskite and cadmium telluride semiconductors to improve solar cell efficiency for years. They claim the champion tandem cell has the potential to reach a 30% efficiency. Schematic of the solar cell Image: PV array made of cadmium telluride (CdTe) solar panels Cadmium telluride (CdTe) photovoltaics is a photovoltaic (PV) technology based on the use of cadmium telluride in a thin semiconductor layer designed to absorb and convert sunlight into electricity. Unlike conventional silicon panels that use thick layers of silicon, these solar cells use a simpler, less expensive approach — depositing an ultra-thin.
