

# Can flow batteries be recharged

## Overview

---

A flow battery is a rechargeable in which an containing one or more dissolved electroactive elements flows through an that reversibly converts to . Electroactive elements are "elements in solution that can take part in an electrode reaction or that can be on the electrode." Electrolyte is stored externally, generally in tanks, and is typically pumped through the cell (or cells) of.

Overview Design History Evaluation Traditional flow batteries Hybrid Organic Other types

A flow battery is a rechargeable fuel cell in which an electrolyte containing one or more dissolved electroactive elements flows through an electrochemical cell that reversibly converts chemical energy to electrical energy. Electroactive elements are "elements in solution that can take part in an electrode reaction or that can be adsorbed on the electrode." Electrolyte is stored externally, generally in tanks, and is typically pumped

through the cell (or cells) of ...
