

Can string inverters be connected to the grid

Overview

A grid tie string inverter is a type of solar inverter specifically designed to connect a solar panel system to the public electricity grid. This crucial component converts the direct current (DC) electricity generated by solar panels into alternating current (AC) electricity, which is usable by your home appliances and can be fed back into the electrical grid. Here's an outline to help you understand string connected grid inverter: 1. In DC, electricity is maintained at.
