Overview

Fixed structures: suitable for open and flat installation environments such as the ground, roof, and water surface. Photovoltaic panel brackets are the unsung heroes of solar installations. Think of them as the skeleton that holds your solar panels in place - without proper support, even the most advanced panels can't deliver peak performance. Adjustable structures: including manually. Roof type brackets are usually classified into three types, including color steel plate roof brackets, pitched roof (tile roof) brackets, and flat roof brackets. Color steel plate roof bracket consists of color steel plate clamps or fixings, rails (beams), component presses, rail connectors, bolts. This system is placed directly on the roof, and there are different types of them. In the case of the normal roof, i.
