The content of any electronic and/or print versions of the present document shall not be modified without the prior written. This paper discusses 5G NR Release 16 base station transmitter conformance testing requirements and the specific challenges that arise in millimeter wave (mmWave) frequency testing. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the. Each macro site supporting 5G typically consumes substantially more power than its 4G predecessor due to the complex active antenna units (AAUs) and increased signal processing requirements. Industry data indicates a single 5G AAU can demand 2. The phrase “communication batteries” is often applied broadly, sometimes.
