Communication tower small base station

Overview

A small cell base station is a type of wireless communication infrastructure that is designed to enhance network capacity and coverage, particularly in areas with high user density or where traditional macrocell base stations face challenges. Macro-base stations are tall towers ranging from 50 to 200 feet in height, placed at strategic locations to provide maximum coverage in a given area. Those are equipped with large towers and antennas that transmit and receive radio signals from wireless devices. A Pico cell base station is a small. Our integrated circuits and reference designs help you create small cell base stations that enable multiband operation, higher bandwidth and better system reliability. Our analog front-end devices use a new RF sampling architecture, while our companion power and clocking technologies allow you to. Base stations can range in size from simple all-weather cabinets to equipment bunkers the size of a small house. Ice bridge or waveguide bridge.
