# **Distribution of vanadium mines in Croatian energy storage power plants**

## Overview

---

Vanadium redox flow batteries (VRFB) can store electricity for longer than the widely used lithium-ion technology. This makes them particularly suitable for storing surplus wind and solar power in large facilities and feeding it back into the grid at a later time. This work is a product of the staff of The World Bank with external contributions. accuracy of the data. Vanadium, when present in small amounts in certain ferrous alloys, can significantly improve their properties. As of 2023, Croatia imported about 54.48% of its gas and 100% of its coal needs. Vanitec is a technical/scientific committee bringing together companies in the mining, processing, research and use of vanadium and vanadium-containing. The energy sector is undergoing a fundamental transition – both in.
