Natural abundances -- Periodic table

The natural abundance of chemical elements in the universe by weight of their atoms in ppb (parts per billion; reference value: one billion). Real values can deviate strongly from the information given.

Abundance of elements in Earth's crust

This table gives the estimated abundance in parts per million by mass of elements in the continental crust; values of the less abundant elements may vary with location by several orders of magnitude.

Element Abundance in Earth's Crust

Given the abundance of oxygen and silicon in the crust, it should not be surprising that the most abundant minerals in the earth's crust are the silicates. Although the Earth's material must have had ...

2.8: Abundance of Elements in Earth's Crust

The table shows the abundance of elements in Earth's crust. Numbers show percentage or parts per million (ppm) in mass; 10,000 ppm = 1%. Note that numbers are estimates, and they will vary ...

Abundance of the chemical elements

Hydrogen is the most abundant element in the Universe; helium is second. All others are orders of magnitude less

common. After this, the rank of abundance does not continue to correspond to the ...

terrestrial abundance of elements

The table below ranks the elements according to their preponderance in the lithosphere, which includes the crust and the upper part of the mantle. The proportion of elements within the Earth changes ...

Abundance of Elements in Earth's Crust

This table and periodic table show the relative abundance of elements in the Earth's crust. Each element tile shows its atomic number, symbol, name, and abundance in milligrams per ...
