

# **Energy consumption management system for energy storage projects**

## Overview

---

The ECMS (Energy & Carbon Management System) is a centralized platform that enables real-time monitoring, analysis, and optimization of energy consumption, emissions, and costs — with the goal of improving operational efficiency and supporting sustainability targets. Unlock smarter, more efficient energy use with our integrated energy management system (EMS) and microgrid controllers. We don't just provide energy storage - we offer complete, seamless solutions. This is just one of the many ways companies today are taking on green building trends and making workspaces. Integration to make any Home Assistant device available in SMA SunnyPortal via SEMP protocol. By leveraging the thermal inertia of building envelopes as a form of thermal energy storage (TES), the.
