

Hard-modify the communication base station inverter and connect it to the grid

Overview

This document describes the communication protocol for PV grid-connected string inverters. The protocol has undergone numerous versions with updates to Open SetApp and follow the on-screen instructions (scan the inverter barcode; move the ON/OFF/P switch to P position. To do that, you should connect the first panel's positive terminal to the second panel's negative terminal, which connects to the third panel's positive terminal and continues the process. Who can install MAX Series inverter?

Only qualified electrical technicians are allowed to install MAX series. Commonly used communication technologies for inverters As the brain of the entire power station, the photovoltaic inverter can transmit the collected power station operation data to the communication hardware. In this method, inverters adjust their output power in response to changes in grid voltage. Can grid-connected. Micro inverters can be connected to the wireless router through the built-in Wi-Fi module, string inverters and energy storage inverters can be connected to the wireless router through the external Wi-Fi data collector, the Wi-Fi module or data collector will transmit the data of the inverter.
