# Is solar power generation powerful in winter

## Overview

---

Although solar radiation is lower in winter and there are fewer daylight hours, systems continue to produce energy. Solar power is energy generated from sunlight and converted into electricity using solar panels, also known as photovoltaic (PV) modules. Here's how the process works:. It is obvious that production is higher in summer than in winter. The article supports this by explaining that while snow can temporarily hinder performance, factors such as panel angle. The answer is yes. Photovoltaic solar energy doesn't depend on heat but on light.
