Italy electric vehicle range

Overview

Limited Range: Most EVs have a limited range, typically between 150-250 miles, before needing to be recharged. Charging Infrastructure: While charging infrastructure is improving, it can still be difficult to find public charging stations, particularly in rural areas. In the period January-March 2025, battery electric car (BEV) registrations reached 23,019 units, an increase of 75. Driving the growth is a combination of targeted incentives, expansion of supply and increased environmental awareness. Italy has seen a significant shift toward electric and hybrid vehicles (EVs and HEVs) in recent years, driven by environmental concerns, governmental incentives, and advancements in car technology. 84% of the electric vehicles offered on the market cost between €20,000-80,000, while the price range < €20,000, which for ICE vehicles represents the segment with the best-selling cars, is not currently fully. Since 2017, the electric vehicle (EV) market in Italy has transitioned from a marginal niche into a significant segment of the national automotive industry. Overview
Government policy and incentives
Charging infrastructure
Public opinion and barriers

Since 2017, the electric vehicle (EV) market in Italy has transitioned from a marginal niche into a significant segment of the national automotive industry. The market's evolution has been characterized by an early phase of exponential growth (2017-2021), a period of stagnation influenced by energy costs and supply chain volatility (2022-2023), and a definitive structural rebound in 2025. As of 31 December 2025, battery electric vehicle (BEV) registrations reached an all-time high of 94,97...
