

# Lithium battery energy storage per kilogram

## Overview

---

Energy density in lithium-ion batteries measures stored energy per unit mass (Wh/kg) or volume (Wh/L). Typical Li-ion cells achieve 150–250 Wh/kg and 350–700 Wh/L, outperforming lead-acid and nickel-based alternatives. Critical for portable, wearable, medical, and aerospace devices, where every gram counts. This measures energy per unit. Some lithium batteries are lighter but store less energy, while others are heavier but pack in more power per unit. These batteries are commonly found in electric vehicles and.
