Microgrid Small Hydropower

Overview

Micro-hydro power is emerging as a viable solution for communities seeking sustainable, off-grid electricity. Micro-hydro systems provide a renewable and reliable energy source, particularly in rural or mountainous regions, by harnessing the energy of flowing water from small. Idaho National Laboratory, working with Fall River Electric Cooperative, demonstrated how the new Microgrid in a Box can strengthen small hydropower plants' abilities to help electric grids recover after a blackout or power disturbance. Farm hydropower projects have existed for many years, from waterwheels used for grinding grain and forging to modern hydroelectric turbines designed to run compressors and motors. Using newly developed technologies, INL researchers demonstrated how.
