

Morocco Hydrogen Energy Base Station

Overview

On behalf of the German Federal Government, KfW is supporting Morocco in building this reference plant to the south of Agadir. The “green hydrogen” produced there is intended to help meet the country's growing demand for energy and enable it to achieve its climate targets. Morocco is pursuing an ambitious green hydrogen strategy, based on its strong solar and wind resources, its proximity to Europe, and its active collaboration with European Union (EU) stakeholders. The strategy has the potential to reshape regional energy trade, industrial policy, and. Speech by His Majesty King Mohammed VI on the occasion of the 24th anniversary of the Sovereign's accession to the Throne, J. It uses the. nounced this long-awaited framework in March 2024. Rather than diving headlong into projects prior to having established a clear set of national goals, Morocco has chosen to develop a comprehensive approach, combining green hydro en with industrial and infrastructure development.
