New energy produces wind blade energy storage batteries

Overview

Swedish startup Sinonus is transforming discarded wind turbine blades into large batteries to create a cutting-edge energy storage solution. Wind turbines evolve daily as engineers push the envelope, building offshore wind farms far out to sea and creating ultra-high-altitude wind. Breakthroughs in battery technology are transforming the global energy landscape, fueling the transition to clean energy and reshaping industries from transportation to utilities. With demand for energy storage soaring, what's next for batteries—and how can businesses, policymakers, and investors. Sinonus' tech can charge carbon fiber, a component of turbine blades, and use it to store energy like a battery. Energy storage is key to expanding the use of renewable energy.
