Rooftop solar panel angle

Overview

The ideal roof pitch for solar panels typically ranges from 30 to 40 degrees. This angle maximizes energy harvest and ensures panels are oriented correctly towards the sun, improving solar energy production. Most homeowners should choose the Year-Round angle. Being 5-10 degrees "flatter" than perfect is often better for self-cleaning (rain washing) than being too steep. When the sun is lower in the sky, solar panels need a greater. The 30-degree rule is flexible: While 30 degrees is often cited as optimal, any roof pitch between 15-45 degrees will deliver excellent solar performance, typically within 5-10% of peak efficiency. This can vary depending on your north-south location, but it generally ranges from 30-45 degrees for.
