## Overview

---

A solar panel battery charger circuit diagram is a visual representation of the components and connections used to charge a battery using solar energy. It shows the flow of electricity and the various components involved, including the solar panel. In this project, we will make a solar power battery charger that will provide power to devices operating 5V through USB cables such as mobile phones and Arduino-based projects. Here you can see the circuit diagram of the project. 3Ah rechargeable Lead-acid battery from the solar panel. This solar charger has current and voltage regulation and also has over voltage cut off facilities. These panels consist of multiple photovoltaic (PV) cells, which convert sunlight. But how can you make the most of solar panels?

One way is to use a solar panel battery charger.
