# Single photovoltaic panel voltage and current

PUSUNG-R (Fit for 19 inch cabinet)

## Overview

---

Open Circuit Voltage (Voc): This is the maximum voltage your panel can produce, usually measured on a bright, cold morning. This is your typical voltage we put on solar panels; ranging from 12V, 20V, 24V, and 32V solar panels. The image illustrates that as irradiance increases, the module generates higher current on the vertical axis. It's analogous to water pressure in a pipe. A higher voltage means a greater potential to push electrons through a circuit.
