Small photovoltaic equipment inverter

Overview

Rather than a large, central string inverter, a micro-inverter is a small DC-AC converter that is connected to the back of each solar panel. The inverter is a critical part of any solar electric system that needs to power any AC (Alternating Current) loads. So AC loads would include anything plugged into a typical household outlet. ClimeCo certifies products whose carbon emissions have been assessed, verified, decarbonized, and are on a committed path towards continual emissions reductions. Microinverters provide several advantages over traditional inverters. Performance Trade-off: While microinverters add $1,500-$3,000 to a typical residential solar system, they can increase energy production by 5-25% in shaded or complex roof conditions, often justifying the premium through enhanced long-term performance and 25-year warranties.
