Solar Photovoltaic Power Generation Micro

Overview

Solar photovoltaic micro -inverters are a device that directly converts solar energy into electrical energy. Its core function is to convert the DC electricity generated by solar photovoltaic boards into AC power for home or commercial power equipment. Microgeneration technologies include small-scale wind turbines, micro hydro, solar PV systems, microbial fuel cells. Microgeneration is a term typically used to describe a type of generator that harnesses energy from renewable sources to power a home, business or other local electricity user.
