. A solar cell, also known as a photovoltaic cell (PV cell), is an electronic device that converts the energy of light directly into electricity by using the photovoltaic effect. [1] It is a type of photoelectric cell, a device whose electrical characteristics (such as current, voltage, or. **What is a solar cell?**

How does a solar cell create electricity from sunlight?

What materials are commonly used to make solar cells?

How are multiple solar cells connected in a solar panel?

What are some advantages of using solar cells for energy?

What challenges or limitations do solar cells face. When light shines on a photovoltaic (PV) cell – also called a solar cell – that light may be reflected, absorbed, or pass right through the cell. It's about the size of an adult's palm, octagonal in shape, and colored bluish black. This conversion is based on the principle of photovoltaic effect in which DC voltage is generated due to flow of electric current between two layers of semiconducting materials (having opposite.
