

**KREATYWNY ENERGY POLSKA**

# **Solar-powered cattle shed**

## Overview

---

Learn to power a remote cow shed with solar energy, inspired by a farmer's self-sufficient solution for off-grid water pumping. The cattle shed roof had room for more solar modules, but there was nowhere to put the extra power. A wine grower and farmer built a solar-powered well to supply water for his remote cattle shed. It helps you power tools, light your workbench, and all this without running wires from your house. Going for solar. With the beef industry facing continuous pressure from environmentalists and heat stress in feedlot cattle incurring great financial losses annually, producers are seeking inventive ways to simultaneously improve animal health and decrease high electricity costs. Farms face unique energy challenges. Irrigation pumps often sit in distant fields and rely on diesel or unstable grid supply.
