Space Mystery Solar Power Generation

Overview

This study evaluates the potential benefits, challenges, and options for NASA to engage with growing global interest in space-based solar power (SBSP). Space-based solar power (SBSP or SSP) is the concept of collecting solar power in outer space with solar power satellites (SPS) and distributing it to Earth. Its advantages include a higher collection of energy due to the lack of reflection and absorption by the atmosphere, the possibility of very. First proposed in 1968 by aerospace engineer Peter Glaser, the idea has cycled through hype and skepticism for decades. Today, a new wave of companies is rethinking the architecture, starting with the parts of the system that are actually buildable now. of this energy is reflected back into space by the atmosphere. -based startup Space Solar, tested a special beaming device that can wirelessly transmit power 360 degrees around.
