## Overview

---

The inverter circuitry in a laptop inverter is responsible for converting the direct current (DC) power from the laptop's battery or power supply into alternating current (AC) power. This AC power is then used to illuminate the laptop's screen backlight. This power conversion is essential because most laptop screens, particularly LCDs (Liquid Crystal Displays), require AC to. Many LCD screens use a cold-cathode fluorescent lamp that requires an inverter. When a computer is plugged into the wall, it converts the power. An air conditioner inverter plays a crucial role in enhancing the efficiency and performance of your cooling system.
