Thoughts after using solar power at home

LPW48V100H
48.0V or 51.2V

Overview

The pros of using solar panels include a lower carbon footprint, lower electric bills, potentially higher home value and tax credits. The YouTube account LRN2DIY (@LRN2DIY) posted a video explaining the homeowner's three biggest regrets after going solar: He "should have used an established company,". There are three main contributors to my solar array economics outperforming their financial forecast: 1) The modeling assumptions were relatively conservative. I live in a northern climate and get a decent amount of snow most years, so I ensured the soiling rate (panel coverage) reflected this. A solar panel is a device that helps convert sunlight into electricity. The cons include high initial costs, specific roof requirements, possible higher property. That's the average price of a US household going solar, and that's after you manage to wring out all of the available tax credits or rebates, local and federal. As Eric wrote for CNET, he learned several solar energy lessons by trial and error. It can reduce your electricity bills and you might even earn money by selling the excess back into the grid. But with the average system costing around £7,000 to install, the initial outlay is not.

Thoughts after using solar power at home
