What is the roof with photovoltaic panels called

Overview

Also known as solar roofs, solar tiles, or solar roof tiles, solar shingles are tile-shaped panels permanently installed on your home's roof. These are small solar panels that can be integrated directly into the roof, creating a more discreet and aesthetically pleasing solar system. Rooftop solar systems rely on the photovoltaic effect, where cells generate electricity in response to sunlight. The goal of solar rooftop design is to maximize energy production while taking local construction laws and regulations into consideration. Unlike traditional solar panels, which are mounted on top of an existing roof, solar roofs use shingles or tiles that double as both roofing material and solar energy. Rooftop photovoltaic (PV) systems, often referred to as rooftop solar power systems, are solar power generating units that are installed on the roof of a residential, commercial, or industrial building.
