

Wind and solar power generation system line

Overview

The Wind Generation Hourly Average is represented with the solid blue line. This dashboard provides the most recent and day-ahead forecasted wind and solar production amounts, both of which are derived using. Integration of substantial wind and solar capacity typically requires transmission system investments to: (1) access the best resource locations and (2) smooth the variability of renewable generation over larger areas. In our latest Short-Term Energy Outlook, we forecast that wind and solar energy will lead growth in U. solar power generation will grow 75% from 163 billion kilowatthours.
